

Brain Injury Technologies Think tank

Technologies for Independent Living

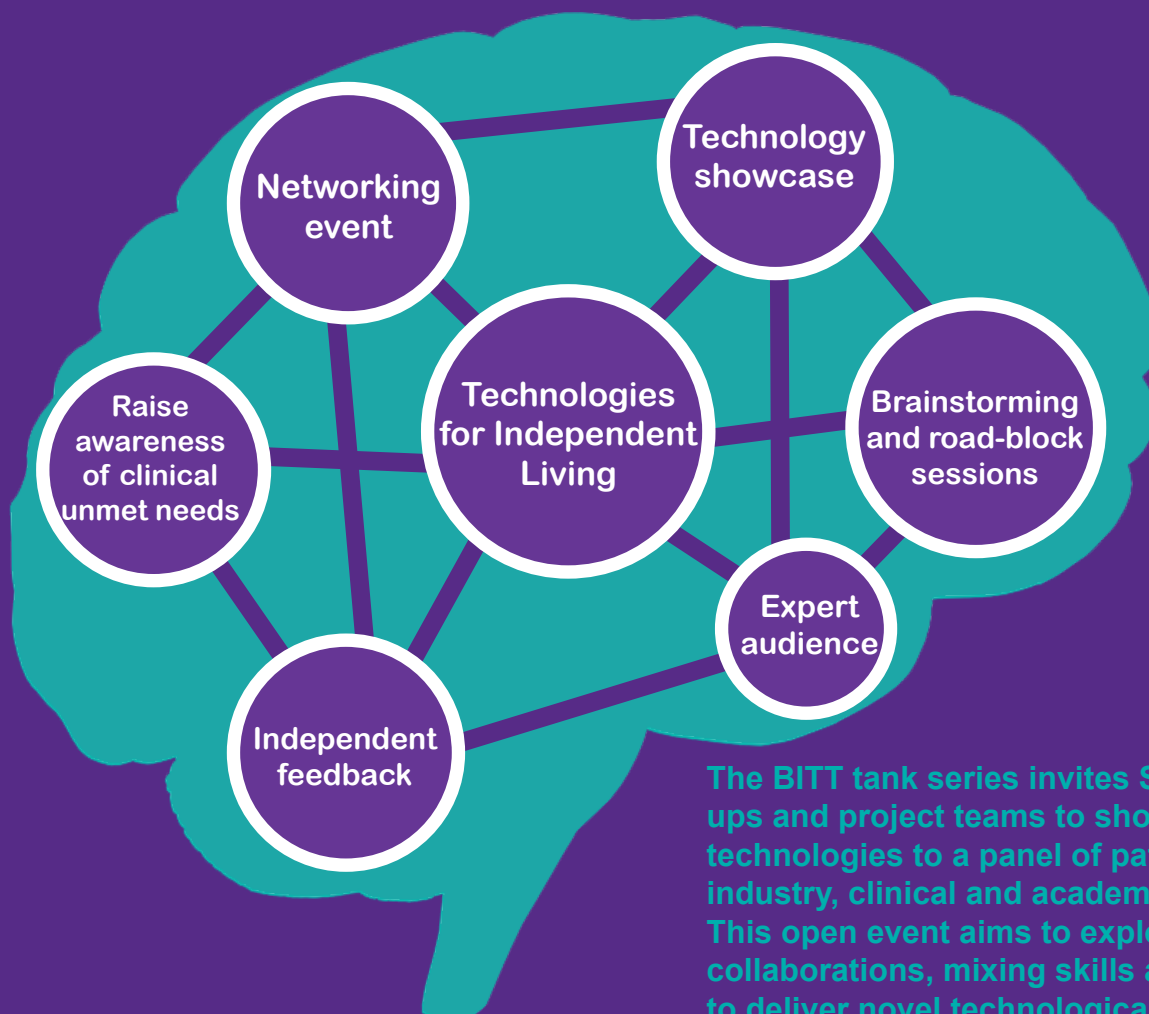

Wednesday 27 January 2016

The Courtyard Suite, Madingley Hall, Cambridge, CB23 8AQ

Brain Injury HTC leads: Professor Valerie Pomeroy, Professor of Rehabilitation (University of East Anglia) and Rehabilitation lead (BI HTC)

Day chaired by Dr Peter Jarritt, Deputy Director and Medical Device Development lead (BI HTC)

INVITATION: We are now inviting expression of interest from SMEs, start-ups and project teams to take part in our technology showcase!

The BITT tank series invites SMEs, start-ups and project teams to showcase their technologies to a panel of patients, carers, industry, clinical and academic experts. This open event aims to explore potential collaborations, mixing skills and expertise to deliver novel technological solutions for the brain injury patient pathway.

Why should I attend?

- **As a technologist/start-up:** networking with the right organisations to further your business and commercialisation opportunities.
- **As a clinician/researcher:** explore potential collaborations between industry, academics and clinicians to support the development of new medical devices.
- **As a member of the public:** develop networks and informally engage with innovators in the development of relevant products.
